

INDUSTRIAL MACHINE MAINTENANCE DIVISION

CNC • VMC • LASER CUTTING MACHINES • ELECTRICAL • AUTOMATION • HYDRAULICS • PNEUMATICS • PREVENTIVE MAINTENANCE

Keeping industrial machines reliable, productive, and ready for production.

1. ABOUT CRECER GRANDE

Crecker Grande is an engineering and industrial services venture focused on supporting manufacturing businesses with practical engineering, maintenance, manufacturing and technical support solutions. We combine engineering capability, industrial experience and a flexible technical network to respond to project-specific requirements.

Our objective is to work as a dependable technical partner to manufacturers by helping reduce avoidable downtime, restore machine availability and improve maintenance discipline.

2. ABOUT THE DIVISION

Crecker Grande - Industrial Machine Maintenance Division provides breakdown support, preventive maintenance, troubleshooting, installation and technical assistance for CNC, VMC, laser cutting and other industrial machinery.

The division is supported by an on-demand technical network of 10 engineers and 10 technicians with experience across reputed industrial environments. Resources are deployed according to machine type, fault condition, location and service requirement.

SERVICE MODES

- Breakdown visits
- Scheduled maintenance
- Preventive maintenance
- AMC support
- Installation & commissioning
- Machine relocation support

MACHINE FOCUS

- CNC / VMC
- Laser cutting machines
- Industrial electrical systems
- Automation & controls
- Hydraulic systems
- Pneumatic systems

3. OUR MAINTENANCE CAPABILITIES

Machine Maintenance & Troubleshooting

- Mechanical troubleshooting
- Electrical fault diagnosis
- Control-panel checks
- Sensors, switches and interlocks
- Motors, contactors and relays
- PLC / HMI diagnostic support
- Servo and drive-related diagnostics
- Hydraulic and pneumatic troubleshooting
- Lubrication-system checks
- Machine alignment / condition checks
- Utility and auxiliary-system checks

Multi-discipline support under one coordination point

Many machine failures involve more than one discipline. Crecer Grande can coordinate mechanical, electrical, automation, hydraulic and pneumatic expertise based on the fault instead of limiting the response to a single trade.

SERVICE SCOPE CONFIRMATION

The exact scope is confirmed after reviewing the machine make/model, controller, fault symptoms and site conditions. OEM-restricted activities are handled subject to available access, approvals and technical documentation.

4. BREAKDOWN MAINTENANCE & FAULT DIAGNOSIS

When a machine stops unexpectedly, the priority is to identify the fault safely, restore functionality where feasible and document the root cause or next required action.

MECHANICAL	ELECTRICAL	AUTOMATION
- Abnormal noise / vibration - Bearing & drive issues - Couplings / belts - Slide / motion issues - Lubrication checks - Mechanical damage	- Power & control circuits - Contactors / relays - Motors - Sensors / limit switches - Wiring / terminals - Power supplies	- PLC diagnostics - HMI alarm review - Servo / drive alarms - I/O checks - Interlocks - Control communication

5. OUR BREAKDOWN RESPONSE APPROACH

THE OBJECTIVE

Not every breakdown is solved by replacing parts. Our approach is to identify the fault logically, avoid unnecessary replacement wherever possible, and give the customer a clear technical path to recovery.

Typical information requested before a visit

- Machine make and model
- Controller / CNC control make
- Alarm number or message
- Photographs / videos of the fault
- What happened immediately before the breakdown
- Recent repairs or part replacements
- Site location and preferred service window

6. PREVENTIVE MAINTENANCE

Preventive maintenance is intended to identify deterioration before it becomes a production-stopping failure. The actual checklist is tailored to the machine type, operating hours, OEM recommendations and site conditions.

TYPICAL PM CHECKS

- Cleaning & visual inspection
- Lubrication condition
- Belts / couplings / bearings
- Electrical terminals
- Cooling fans & filters
- Sensors and switches
- Hydraulic / pneumatic leaks
- Air pressure / FRL units
- Machine alarms / history
- Safety interlocks
- Basic condition observations

7. AMC & SCHEDULED MAINTENANCE

PER-VISIT

- Single planned visit
- Defined machine / scope
- Inspection + service report
- Recommendations

PERIODIC

- Monthly / quarterly visits
- Preventive checklist
- Maintenance history
- Action tracking

AMC

- Agreed machine coverage
- Scheduled PM
- Priority support terms
- Service records

AMC scope, response commitments, exclusions, consumables, spares and travel requirements are defined commercially before commencement. This keeps the maintenance arrangement transparent for both parties.

8. LASER CUTTING MACHINE SUPPORT

Creceer Grande provides maintenance and diagnostic support for laser cutting machines and their associated electrical, cooling, motion and auxiliary systems, subject to machine-specific access and technical information.

TYPICAL SUPPORT AREAS

- Machine alarm diagnosis
- Electrical / control checks
- Motion and sensor issues
- Servo / drive diagnostics
- Chiller & water-circulation issues
- Pump / flow related faults
- Cooling-system checks
- Cutting-head peripheral checks
- Gas / pneumatic auxiliaries
- Preventive maintenance

9. CHILLER & AUXILIARY SYSTEM SUPPORT

Cooling-system faults can stop a laser machine even when the laser and motion systems are otherwise functional. Our service approach includes checking water circulation, pump operation, flow/level indications, hoses, electrical supply, sensors and related alarms before recommending replacement or further action.

SPARE PART SUPPORT

Where a faulty component is identified, Creceer Grande can also support sourcing or supply of suitable replacement parts such as pumps, sensors, relays, hoses, connectors and other compatible chiller or machine auxiliaries.

10. INSTALLATION, RELOCATION & COMMISSIONING SUPPORT

Industrial machines frequently require technical support during relocation, installation, re-connection and recommissioning. Crecer Grande can coordinate the required mechanical, electrical and service resources according to the project scope.

11. REPAIR, MODIFICATION & IMPROVEMENT SUPPORT

Maintenance sometimes identifies a recurring weak point rather than a one-time failure. In such cases, Crecer Grande can coordinate repair, component modification, reverse engineering or custom-spare development through its engineering and manufacturing capabilities.

12. WHAT YOU CAN SEND US

MACHINE DETAILS

Make, model, year, controller and machine type.

ALARM / FAULT

Alarm code, message, symptom or abnormal behaviour.

PHOTOGRAPHS / VIDEO

Panel, machine, damaged component or fault behaviour.

SERVICE HISTORY

Recent breakdowns, repairs, replacements or recurring issues.

MANUAL / DRAWING

Available electrical, hydraulic, pneumatic or machine documentation.

SITE REQUIREMENT

Location, preferred visit date and production urgency.

13. INDUSTRIES WE SUPPORT

- General engineering
- Laser cutting job shops
- Paper & process industries
- Electrical & automation
- CNC / VMC machining
- Industrial machinery
- Steel & metal industries
- Machine builders / OEMs
- Sheet-metal & fabrication
- Automotive component units
- Material handling
- Manufacturing MSMEs

14. WHY CRECER GRANDE

TECHNICAL NETWORK

- 10 engineers
- 10 technicians
- Multi-discipline resources
- Project-based deployment

ONE-WINDOW SUPPORT

- Maintenance
- Engineering
- Custom spares
- Manufacturing support

PRACTICAL FOCUS

- Fault-based approach
- Clear reporting
- Flexible engagement
- Industrial orientation

15. OUR VALUE PROPOSITION**DIAGNOSE. RESTORE. MAINTAIN. IMPROVE.**

Whether you need a one-time breakdown visit, scheduled preventive maintenance, AMC support, laser-machine diagnostics, relocation assistance or custom spare development, Creceer Grande can coordinate the engineering and technical support required to keep industrial equipment productive.

WORKING PRINCIPLE

We aim to understand the actual fault or maintenance requirement first, deploy the appropriate technical resource, document the work performed and recommend practical next actions where further repair, parts or engineering support is required.
